

PwC's Custom Analysis

A comprehensive screening of your company's imports

Why PwC's Custom Analysis?

The customs duty analysis will give you an overall view of import quantities and duties paid as well as our suggestion for favourable customs procedures and treatments in order to avoid unnecessary duties in the future.

The results of the analysis: an overall view of your company's imports

- Paid import duties on an annual basis
- Paid import VAT (until 2018)
- Average customs duty percentage
- Customs value declared on an annual basis
- Freight costs on an annual basis
- Incoterms and customs procedures used
- Customs classification codes and preferential origin declared
- Countries of origin and dispatch
- 30 biggest importation measured by costs of the import, by freight costs and by customs value.

Process Outline

- PwC will request the information from the Customs Authorities and perform the analysis.
- We will analyse the data and seek to identify potential savings targets, possible risks and applicable customs procedures.
- The customs analysis will not require time or effort from your employees.

We will provide an identification of risks and recommendations for future duty savings

- Identification of risks or savings related to applied customs codes
- Suggestions for the use of preferential origin treatments and customs procedures as well as an evaluation of the related duty savings.
